

A new book from the International Healthcare Worker Safety Center, U.Va. Health System:

# Preventing Occupational Exposures to Bloodborne Pathogens: Articles from Advances in Exposure Prevention, 1994-2003

With over 70 articles illustrated with figures, tables and photographs, *PREVENTING OCCUPATIONAL EXPOSURES TO BLOODBORNE PATHOGENS* is an invaluable reference. It contains a wealth of practical information on reducing bloodborne exposures in the healthcare workplace and complying with OSHA standards, as well as cutting edge research and extensive analysis of percutaneous injury data from a large network of U.S. hospitals. Articles cover a wide range of subjects, from using denominators to calculate percutaneous injury rates to the legal implications of needlestick injuries.

*PREVENTING OCCUPATIONAL EXPOSURES TO BLOODBORNE PATHOGENS* includes:

- more than 25 EPINet reports on percutaneous injuries and exposures in key clinical areas and involving a variety of devices and procedures;
- 14 personal accounts of occupationally infected healthcare workers—nurses, physicians, phlebotomists and others—that have been widely used to educate employees about the potential consequences of occupational exposures;
- two groundbreaking articles on occupational exposures to bloodborne pathogens that originally appeared in the *New England Journal of Medicine*;
- a section on legislation and policy that traces the history of needlestick prevention efforts in the U.S. over the last decade.

**Cost:**

1-100 copies

\$25.00 (includes shipping)

Over 100 copies

15% discount (shipping is additional)
