

# Connecting to HSCS-Wireless

Once you have installed MobileIron you can now connect to the UVA Health network 'hscs-wireless'. Joining this network allows you to access UVA Health resources right from your phone while at the hospital.

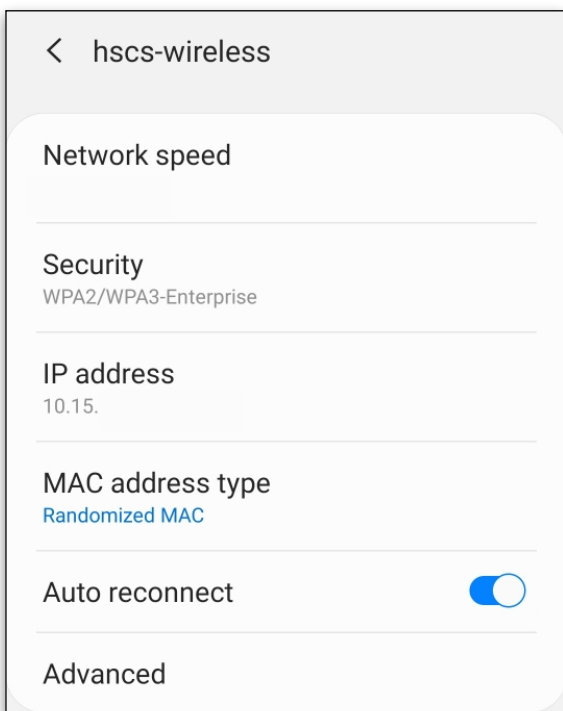

Please forget any UVA guest networks you are connected too.

**1.)** Click on 'hscs-wireless' to connect.

**2.)** After you are connected, click the cogwheel to go your connection settings.

The final step in ensuring connectivity is turning your MAC address type to Phone MAC. Doing this gives you a 10.35 IP address which helps you connect to Vocera and Epic applications.

**3.)** Click on the MAC address type field to bring up the Phone MAC option. Selecting this option will restart your connection. Your connection will resume shortly with its new IP address.
